| **Properties** | • Molecular weight: 42,508 Da  
• Isoelectric point: 9.3 – 9.5  
• pH optimum for activity: 6.5 – 7.5  
• pH range for activity: 4 – 9  
• Optimal testing temperature range: 20 °C – 37 °C  
• Optimal storage temperature: – 70 °C |
| **Purity** | ≥95 % by reversed phase HPLC analysis. |
Specific Activity

90-110 IU/mg using the following Unit definition.

One international unit (IU) is defined as the amount of enzyme that will liberate 1.0 μmole unsaturated oligosaccharides from porcine mucosal heparin per minute at 30 °C and pH 7.0.

One Unit (U) is defined in other preparation as 1 U forms 0.1 μmole of unsaturated uronic acid per hour at 25°C and pH 7.5; 1 IU is equivalent to 600 U

Stability

- PN 50-010 (vial of 0.5 IU) – Expiration is 30 months from manufacturing date frozen at -70 ºC in aqueous buffer containing Sodium Chloride, Sodium Phosphate and Sucrose 5%
- PN 50-010-001 (vial of 0.1 IU) – Expiration is 30 months from manufacturing date frozen at -70 ºC in aqueous buffer containing Sodium Chloride, Sodium Phosphate and Sucrose 5%

Applications

- For the neutralization of heparin in blood and plasma samples before analysis.
- For the similar in vitro neutralization of low molecular weight heparins.
- As integral part of in vitro diagnostic tests for the neutralization of heparin (blood clotting tests, platelet tests).
- In blood collection tubes for the neutralization of heparin.
- For the preparation of low molecular weight heparins from unfractionated heparin.
- As a research reagent (glycosaminoglycan degradation).
- For the preparation of disaccharides of heparin and the preparation of oligosaccharide libraries.

Availability

A proprietary expression system for F. heparinum and the fermentation and isolation processes developed by IBEX Pharmaceuticals allow the production of large quantities of high purity product.
